

Admiral / Imperial Line Firmware Update by Cloud (Web Interface)

Keeping your Network Video Recorder (NVR) firmware up to date is important. It will fix bugs that have been found in the software and will also keep your systems security up to date.

To check for updates in your NVR's firmware:

1. Login to your NVR through the web interface and click "Setup".
2. Select the "Maintenance" dropdown on the left.
3. Select "Maintenance" sub option.
4. Select "Check" or "Check New Version" for the latest firmware version.

The screenshot shows the SCW web interface. At the top, there is a navigation bar with "Live View", "Playback", and "Setup" (highlighted with a red arrow and the number 1). On the left side, there is a sidebar menu with various categories: Client, System, Camera, VCA, Hard Disk, Alarm, Alert, Network, User, Maintenance (highlighted with a red arrow and the number 2), and Backup. Under the Maintenance category, several sub-options are listed: Log Query, HDD, Online User, Network, Camera, Recording, Capture Packets, and Maintenance (highlighted with a red arrow and the number 3). The main content area is titled "Maintenance" and contains several sections: "Restart" (Restart device), "Default" (Keep the current network and user settings), "Factory Default" (Restore all factory default settings), "Export" (Export configuration file), "Import Configuration" (with a text input field, "Browse", and "Import" buttons), "Upgrade" (with a text input field, "Browse", and "Upgrade" buttons), "By Cloud" (with a "Check New Version" button highlighted by a red arrow and the number 4), "Diagnosis Info" (with an "Export" button), "Client Log" (with an "Open Folder" button), and "Auto-Delete File(s)" (with a dropdown menu set to "Never", a text input field, "day(s) ago", and an "OK" button). At the bottom of the main content area, there is a note: "Note: Do not disconnect power or perform any other operation during upgrade."

You will need to clear your browser cache after a firmware update for everything to display correctly.

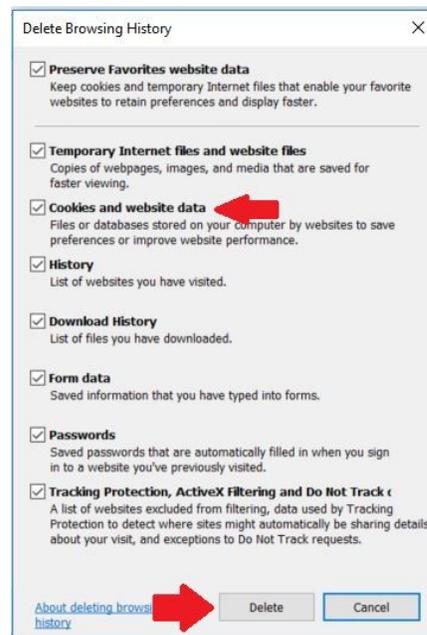

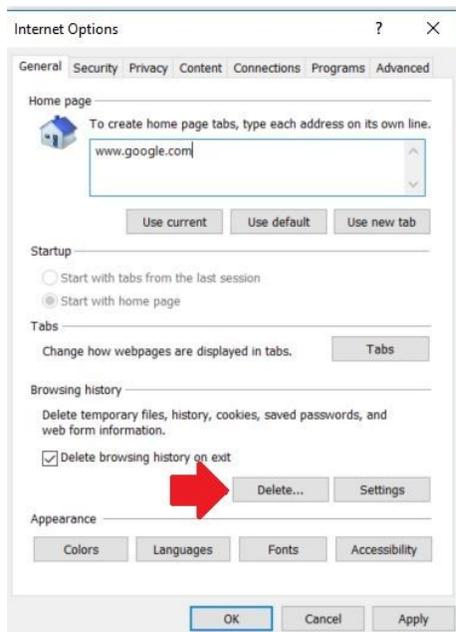

In Internet Explorer:

Select the Tools gear in the top right hand corner

Select "Internet Options".

Select "Delete..." Under Browsing history. Check the Box Labeled "Cookies and website data" and "Delete"

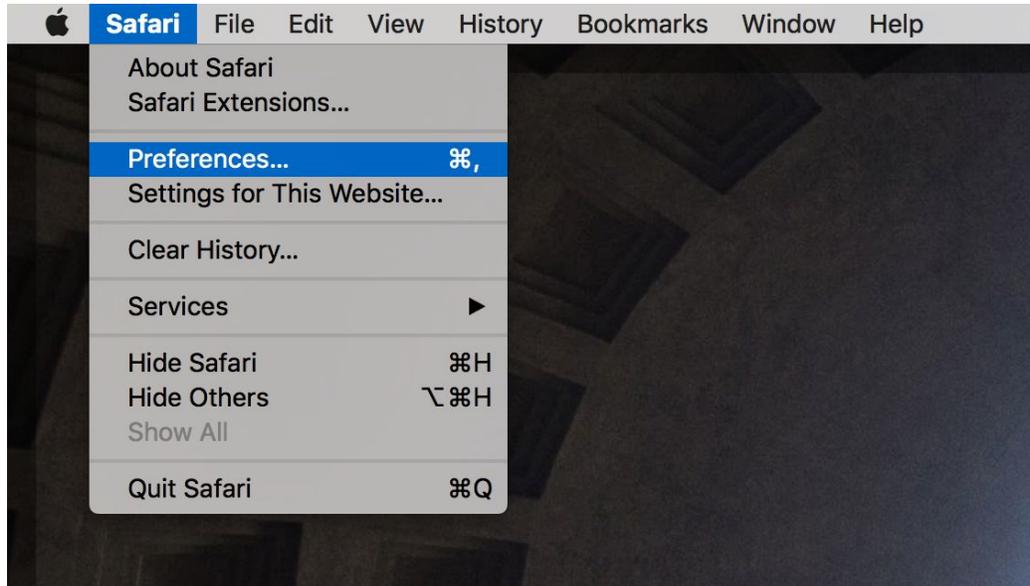

Click "OK"

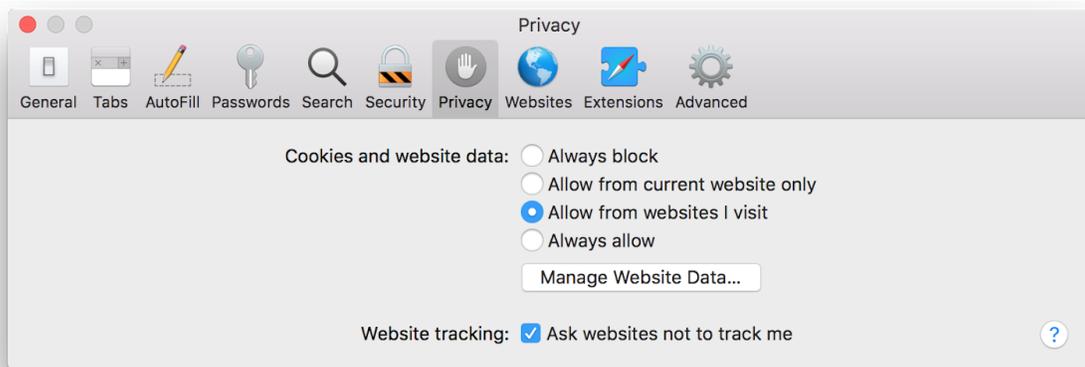

Close and Relaunch Internet Explorer.

Clearing Cache in Safari

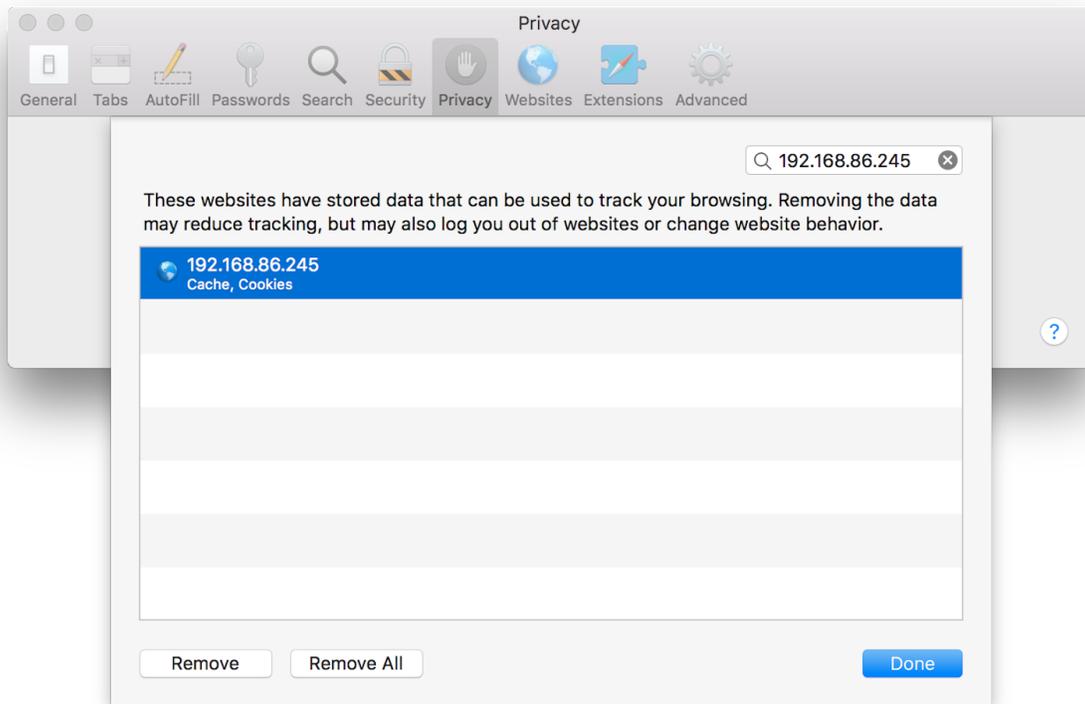

1. On the Apple Menu go to **Safari** then click **Preferences**

2. In the Preferences Panel Click "**Privacy**"

3. Search the IP address or DDNS address in the top right corner. Select the website and click **“remove”** and then **“done”**

4. Close the browser and re-open the web interface.
